PROFILE

Aspiring software developer with hands-on experience in building web applications and completing software development internships. Interested in developing scalable solutions and learning new technologies.

EDUCATION

B.Tech - Information Technology
Sri Manakula Vinayagar Engineering College
09/2023 – 05/2027
CGPA: **9.00** (up to Semester V)

HSC (Bio-Maths Group)
St. Patrick Matric Higher Secondary School
06/2021 – 04/2023
Scored **85.16%** in the Higher Secondary Examination.

ACHIEVEMENTS

- Secured a **Gold** Badge in Java on **HackerRank**.
- Recognized for strong performance in the **e1 Testathon**, conducted by ChuckeeT in collaboration with SMVEC.
- Selected as a **finalist** (Top 5) in the Technical Quiz at Mitilence 2025, a National-Level Technical Symposium.
- GUVI AI Hackathon** – Built an AI-based transaction categorization system and was shortlisted for the second round.
- Contributed ideas and solutions as part of the **Accenture Innovation Challenge**.

SKILLS

- Programming Languages:** Java, Python
- Backend:** Spring Boot
- Frontend:** React.js, HTML, CSS, JavaScript
- Machine Learning:** scikit-learn
- Database:** MySQL
- Development Tools:** IntelliJ IDEA, VS Code
- Soft Skills:** Communication, Team Collaboration, Adaptability and Willingness to Learn.

CERTIFICATIONS

- NPTEL** - Programming in Java (Gold Elite, Top 2%, Score: 97%).
- Infosys** - Front-End Web Developer (Certified).
- Tata Group** - Data Visualisation Virtual Experience (Forage).
- Deloitte Australia** - Cyber Security Virtual Experience (Forage).

PROJECTS

Currency Converter – Spring Boot, HTML, CSS, JavaScript
Built a real-time currency converter integrating the Frankfurter API to fetch live exchange rates across multiple currencies. Designed a clean, responsive interface using HTML, CSS, and JavaScript with a Spring Boot backend.

Book Exchange System - Spring Boot, React.js, MySQL
Developed a full-stack book-sharing platform used by classmates to list, search, and request academic books. Built with Spring Boot REST APIs, a React.js frontend, and MySQL - handling real user interactions beyond a personal test environment.

Automated Transaction Categorization App – ML, Spring Boot, React.js, MySQL
Built a full-stack ML-powered application that automatically classifies financial transactions (food, travel, bills) with over 90% model accuracy. Trained a scikit-learn classifier and integrated it into a production-style pipeline using Spring Boot REST APIs and a React.js frontend - bridging the Python inference engine with a Java backend. Backed by MySQL for transaction storage.

INTERNSHIP EXPERIENCE

Software Development Intern – The Developers Arena | Virtual
01/2026 – 02/2026
Designed and delivered 4 Java applications over the internship period - a Student Information System, Grade Management System, Library Management System, and Employee Management System - each built with structured OOP design, multiple classes, and full documentation. Applied modular package architecture and real-world development workflows including version control with Git and GitHub.

Software Development Intern – TechArtlance | Onsite
01/2026 – 02/2026 | Puducherry, India
Reconstructed a real studio environment in Unreal Engine and independently modelled 3D assets (room interior and arrow) in Blender, gaining practical experience in 3D environment design and game asset creation.
